Projects

WEBSITE TO CHATBOT BUILDER

A web platform for building and deploying AI-powered chatbots with customizable interfaces, advanced caching, conversation memory, and seamless website integration for enhanced customer engagement.

- **Technologies** : Python, Flask, HTML, CSS, JavaScript, OpenRouter API, Selenium, BeautifulSoup

TUMOR DETECTION WEB APP

A web application for detecting brain tumors in MRI images using Convolutional Neural Networks (CNNs). Users can upload MRI images to predict whether they show normal or tumor cells.

- **Technologies** : Python, Flask, NumPy, Pandas, Matplotlib, Seaborn, OpenCV, Pillow, TensorFlow, Scikit-Learn

THREADS OF MEMORY

A dreamlike puzzle-adventure game that invites players to explore a forgotten world filled with mystery and wonder. As you navigate through enchanting landscapes, encounter strangers, and piece together fragments of your past, the story gradually reveals who you are and why the world depends on you for survival.

- **Technologies** : Unreal Engine, C++, Blueprints
